| 4      | Goat Dazzle   | Negative | 0.00  |
| 5      | Goat Reva     | Negative | 0.00  |
| 6      | Goat Scooby   | Negative | 0.00  |
| 7      | Goat Midnight | Negative | 0.00  |

When interpreting these ELISA results, please bear in mind that antibody cross-reactivity between "Corynebacterium pseudotuberculosis" (the cause of caseous lymphadenitis, "CLA") and "Mycobacterium paratuberculosis" (the cause of Johne's disease) antigens has been reported. If you suspect that CLA exists in the animal(s) tested, you may want to consider performing a fecal PCR to confirm a diagnosis of Johne's disease.
